Work in progress and planned research (selected):

The “Innolink project” which i.a. discusses how companies can calculate the costs for different forms of interorganisational cooperation. The project I carried out together with researchers for University of Southern Denmark, University of Aalborg, 5 larger companies, and Institute of Technology. The project is sponsored by the Danish Ministry of Science, Technology and Innovation.

I am in charge of the Danish part of an empirical project, which includes 4-5 Danish companies and 4-5 UK companies. This project analyzes and compares how registration and management accounting systems have been implemented with the use of modern IT technology in UK and Denmark. The project is carried out in collaboration with Stan Brignall from Aston University and Joan Ballentine from Queens University and colleagues from Aarhus Business School.
