

# Competence profile for HA(fil.)

---

HA(fil.) is a research based programme, combining and integrating business administration and philosophy.

The purpose of the programme is to produce graduates with strong interdisciplinary analytical competencies, relevant for the many diverse challenges, which companies face in the modern, globalized community.

The programme integrates courses in business economics, organisation- and management theory with courses in classical and modern philosophy and social analysis. A problem-based pedagogical approach develops the students' abilities to integrate business economics and organisational analysis with philosophical reflection. Through the progression of a series of empirically based group-projects – ending with the bachelor project, the students has constantly refined their understanding and practical skills in developing and integrating the two types of competencies – the business-economical and philosophical analysis.

The required application of interdisciplinary competencies is very demanding and is conducive for the creation of self-confident and independent graduates, who will contribute with original and challenging views and ideas, always prepared to interact and collaborate with other professionals.
