

Smart Building Business Models

VELUX, Copenhagen Business School & Realdania
2018-2020

Objective

The project seeks to facilitate business model innovation, shifting from focus on physical product to human-centred building services. It aims to connect the building industry's business concerns around sustainability, digitization, and human-oriented building in the Internet of Things (IoT). It addresses the need for business model innovation in coordinated consultation with both the service provider and the people living and working in smart buildings.

Lara Anne Hale

I contribute to the BOS Blog, and I will be hosting GRB fellow Amanda Williams, PhD from the Group for Sustainability and Technology at ETH Zurich in Spring 2019.

In my role as Assistant Professor at CBS, I teach and supervise (both bachelor and masters) on sustainability topics; and in Spring 2019, I will be course coordinator for the IMK bachelor course on Responsible Management.
